HOW TO APPLY LANDSCAPE MULCH

Steps to follow:

- 1). Remove any weeds, large stones, etc.
- 2). Apply landscape fabric, or layers of newspaper for a more environmentally friendly weed barrier that will biodegrade.
- 3). Spread mulch around flowers at the thickness of 2 or 3 inches and for trees and shrubs, between 3 to 4 inches. Try and keep mulch away from stems and trunks.
- 4). Apply a crisp edging around the beds.

For stone mulches, it is best to use landscape fabric. Stone mulches are ideal for areas that receive high volumes of run off, slopes, or windy sites.
