MILLER WASTE SOLUTIONS GROUP  
LET US HELP YOU GET  
YOUR CHUTE TOGETHER.

## Garbage Chute and Compactor Cleaning

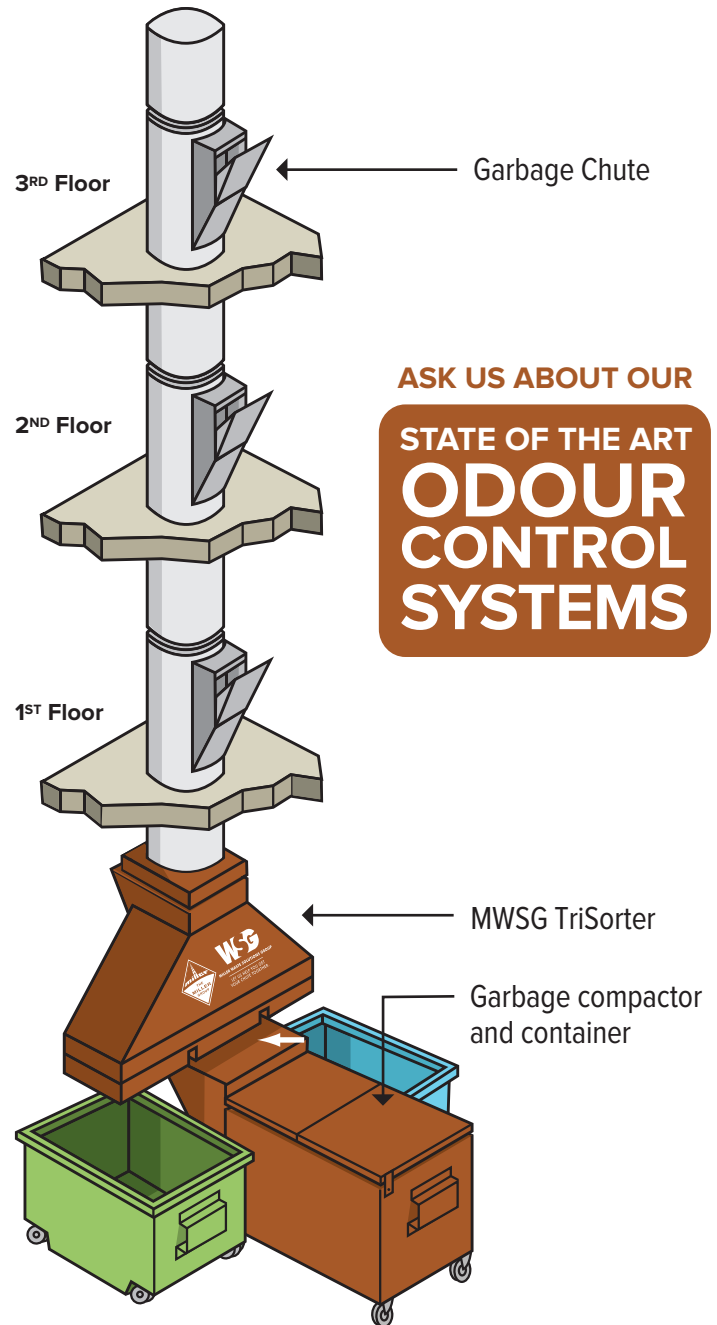

### If your garbage chutes aren't clean you may have more residents than you think.

A regular professional garbage chute cleaning is essential to the quality of life in your building.

Over time, garbage dries and cakes the sides of the chute, causing unwanted bacteria and odours to linger in the building. In fact, the building's compactor becomes a breeding ground for unwanted pests. Having your garbage chute professionally cleaned by **Miller Waste Solutions Group** can effectively "close the cafeteria" on your problem. Having the chutes cleaned regularly is a proven and effective method in the prevention of airborne hazards for your residents.

We utilize high-pressure and scraping methods, effectively eliminating the dried garbage and odours coming from the chute. Not only does our exclusive process clean the chute - we also effectively eliminate the fire hazards that exist within the chute.

We clean the flammable grease and sludge that is baked onto the inside. Our process goes from top-to-bottom of the chute, including the compactor.
